

Presentation Management Solution for Microsoft® PowerPoint®

Getting Your PowerPoint® Presentations Under Control

- Are you overwhelmed with PowerPoint presentations?
- Are your sales people creating their own presentations instead of using brand approved marketing content?
- Is your marketing staff spending too much time creating custom presentations for special projects?

If so, the Interwoven Presentation Management Solution (IPMS) was designed for you.

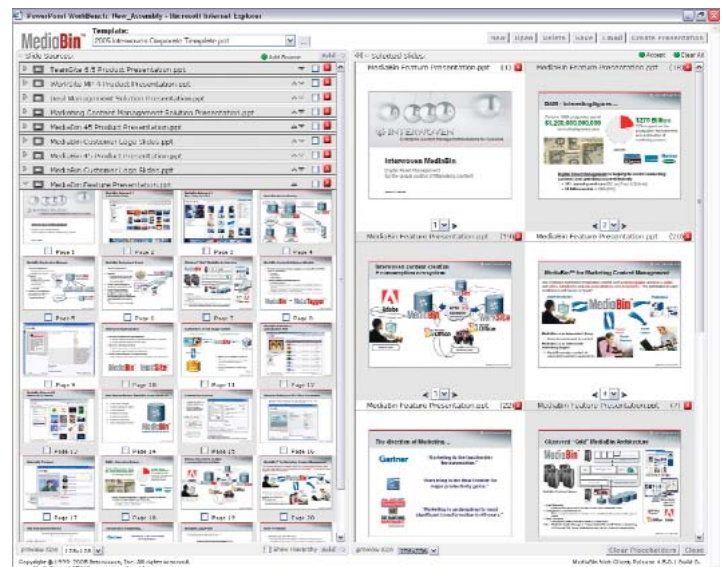

Interwoven's Presentation Management Solution extends the power of corporate brand management with the MediaBin Presentation WorkBench, a new tool for assembling, managing, and distributing PowerPoint files within MediaBin Asset Server™. Everyone that uses PowerPoint—Marketing, Sales, Engineering, Financial Services, Legal, Human Resources, and any other group that's suffering from having too many presentations—will love this new tool inside the MediaBin Web Client.

Increase Brand Control and Consistency

The IPMS enables companies to increase brand control and consistency within all of their PowerPoint presentations. Users can easily assemble, manage, and distribute custom presentations using brand approved content and corporate templates. Marketing and brand managers decide which presentations should be available to various departments and what templates should be used. Users are constantly pulling from the most up-to-date material available and the corporate "look and feel" is preserved in every presentation created.

Empower Your Sales Force to Create Custom Presentations

With the IPMS, sales people and other business users can now easily assemble customized presentations for every meeting using just the right combination of slides. And because the MediaBin Presentation WorkBench is available via the MediaBin Web Client, you can access and assemble that perfect presentation from anywhere—the airport, a hotel, or your home. The quicker sales people can get what they need, the quicker they can sell.

Users can view multiple PowerPoint presentations (left pane) and quickly assemble a custom presentation (right pane) in a single window.

Work Faster. Save Time.

The IPMS not only allows you to securely store your files, but you can now work faster than ever before possible. Users can view all presentations and automatically assemble the presentation they need in a single window. No more opening each PowerPoint file individually and copying and pasting slides between various files.

Users can also easily share their presentations with other users by sending a simple link—no more sending large attachments via email. And when users can assemble, manage, and distribute their own presentations, marketing people have more time to focus on other projects.

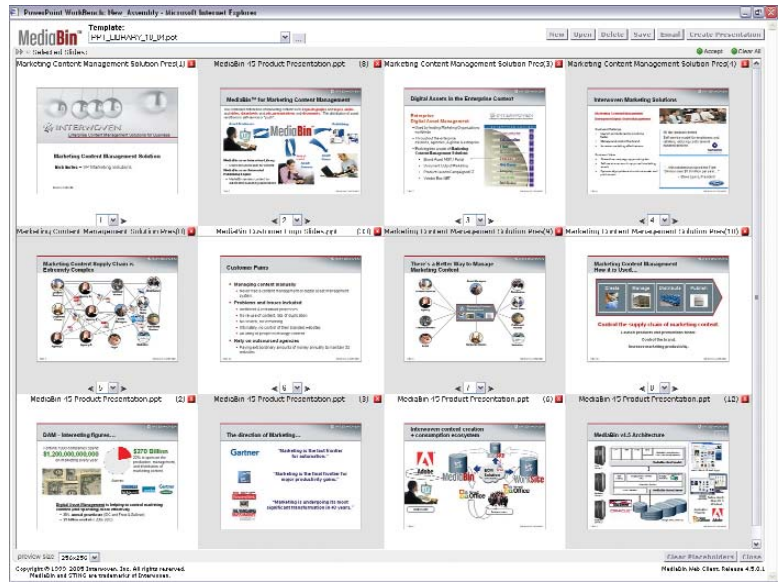

Reduce IT Network Traffic

The IPMS eliminates the need to email large PowerPoint files which greatly reduces network traffic. When users stop sending large PowerPoint files via email, it decreases the size of backups in the email system as well as the storage requirements on the corporate email server. It also reduces the use of bandwidth on the email system, which enables users to work faster and be more productive.

Since the IPMS allows users to view and assemble PowerPoint files within the MediaBin Web Client, they no longer need to download every file to their local PCs. They only download the finished file with the exact set of slides needed, which helps to reduce overall network traffic.

Key Features of MediaBin Presentation WorkBench

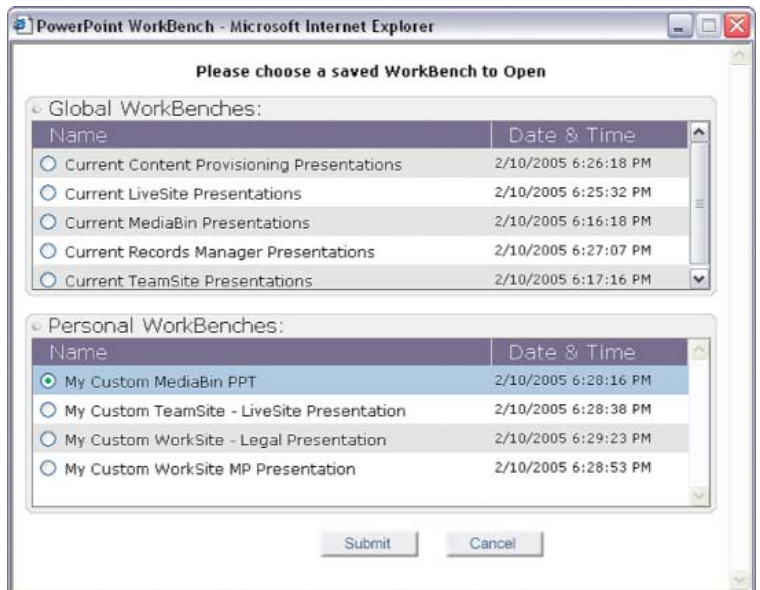

- Work with Multiple Presentations**
 Select multiple PowerPoint presentations within MediaBin and view them in a single window.
- Assemble Custom Presentations**
 Select slides from various files and automatically assemble a new presentation. The chosen slides can be re-ordered in the WorkBench.
- Access Anytime, Anywhere**
 Provides secure, intuitive Web-based access from within the MediaBin Web Client.
- Email WorkBenches**
 Email a link to a private WorkBench you want to share. Other users can open this WorkBench, make any last minute changes or selections, and download the perfect presentation.

Once you have selected all the slides you want, you can expand the right pane (by hiding the list of presentation files on the left pane) to view and sort the slides prior to download.

- Select Templates**
 System can suggest or enforce the use of *approved* templates for new presentations.
- Save WorkBenches**
 Save newly assembled presentations in private WorkBenches for later use. Administrators can save "Global" WorkBenches for everyone to use.
- Efficient Storage**
 When saving a WorkBench, the system only stores the instructions or the "recipe" for assembling a new presentation, not an actual presentation file. The presentation is automatically generated from the original PowerPoint files stored in MediaBin when the user needs it.

Users can save newly assembled WorkBenches in a personal list for later use. Administrators can save "Global" WorkBenches that all users can access.
